Private Companies

International Clients

Cyber Threats Can Affect a Wide Array of Systems & Databases:

Medical
Electrical
Telecommunications
Accounting
Criminal Intel
Proprietary Reports
Client Records
Personnel Files
Student Databases

Cybersecurity

Are your cyber polices keeping you secure?

CHHS has the expertise to address a broad range of cyber law, policy, planning, training, and exercise issues to help secure your organization from cyber attacks. With greater reliance on hi-tech operations and online data storage comes an increased vulnerability. The time to protect critical cyber infrastructure and prepare your business for continuity in the event of an attack is now. Whether you are a government agency grappling with new legislation or executive orders, or a private industry looking to navigate complex policies and regulations surrounding cybersecurity, we can help. CHHS also has domestic and international partners to develop technical assets for your cyber space.

OUR EXPERTISE

Academics

- **Be smart.** Through the development and delivery of academic coursework at the University of Maryland Francis King Carey School of Law, including newly created cybersecurity specialties for Master of Science in Law and Master of Laws graduate programs, CHHS teaches the next generation of professionals the current law and policy of cybersecurity.

Legislative

- **Be relevant.** Founder and Director Michael Greenberger has served on the Maryland Commission on Cybersecurity Innovation and Excellence and the Baltimore-Washington Cyber Task Force – keeping CHHS on the forefront of legislative issues surrounding cybersecurity. The Center has also provided testimony on behalf of important cyber issues.

Publications & Presentations

- **Be heard.** With many experts at the Center, we are a recognized voice in the cyber field. Publications featuring articles by CHHS staff on cyber research and best practices include *US Cybersecurity Magazine, Domestic Preparedness Online Journal*, *Law Practice Today*, and *Journal of Emergency Management*. Staff have also presented at professional conferences, such as CyberMaryland and the National Initiative for Cybersecurity Education.

CYBER SERVICES

Policy Development

- **Be thorough.** The first step in preparing for cyber threats is effective policy development. What legal or regulatory standards should you consider, who is responsible for your cyber infrastructure, what is your back-up plan if your networks fail? CHHS staff can address these and other questions to improve the strength of your agency, business, jurisdiction, or institutional cyber strategy.

Exercise and Training

- **Be ready.** As a newer area of study for emergency management, officials need experience in dealing with cyber threats that could affect critical systems. Our exercise and training team can take your policies to the next level by developing comprehensive tabletop discussions, drills, and exercises to fit individual needs.
